Effects of Anorexia Nervosa on Peak Bone Mass

SEEKING GIRLS 14-22 YEARS OLD WITH A DIAGNOSIS OF
ANOREXIA NERVOSA

Our Mission:

Our research group aims to further medical research and knowledge about common endocrine issues facing young women with eating disorders. Bone problems and fractures could be a result of these endocrine issues.

- We are studying the impact of natural hormones on bone health
- 12 month study with one additional year of follow-up
- 11 total visits (some may be completed closer to home)

INCLUDES BONE DENSITY TESTING, NUTRITIONAL AND HORMONAL
EVALUATION

UP TO \$750 STIPEND

Partners Human Research Committee
APPROVAL Effective Date
February 21, 2013
